

3B SERIES AC & DC LOADS

Key features:

- Models from 1200 VA to 12600 VA
- High Voltage Range, 0 - 300 Vac
- Current Ranges up to 126 A
- High-Speed 4 Digit Precision Metering Capability
- Parallel Operation for Higher Power Applications
- Single, Split or Three Phase Load Configurations
- Operating Modes: CC, Linear CC and CR
- Fast Current Slew Rates
- Go/NoGo Test Support
- Auto-Sequencing
- Bench Models 1200VA or 1800VA
- High Power Load Cabinets
- Standard RS232 and GPIB Interfaces

OVERVIEW

The ADAPTIVE POWER 3B Series Programmable DC Electronic Loads are ideally suited for testing AC power supplies, frequency converters, DC/AC inverters, Uninterruptable Power Supplies (UPS) and transformers. With their ability to support sinusoidal and non-sinusoidal AC voltage waveforms alike, the 3B Series loads can support a wide variety of AC test requirements.

Target applications for these loads are research & development, production test, incoming inspection, quality control and service.

The high power density of 1800VA in a 4U high, single 19" wide rack-mount chassis supports bench testing of most single phase AC products. The 3B Series consists of a total of two bench models and seven cabinet system configurations, providing a wide variation of possible current and power ranges. Starting at 1200 VA and ranging to 12600 VA cabinet systems, all models offer dual current range capability for optimal accuracy and resolution.

UTILITY, DEFENSE AND AVIONICS FREQUENCY SUPPORT

The 3B Series supports an AC frequency range from 40Hz to 400Hz. This covers testing at utility power frequencies for commercial and industrial power sources as well as at 400Hz avionics power for military, defense and commercial aviation power source testing.

GPIB

RS232

3B SERIES AC & DC LOADS

OPERATING MODES

All 3B Series loads support several modes of operation to accommodate different test requirements. Voltage sources like AC or DC power supplies are best tested using Constant Current (CC) or Constant Resistance (CR) mode.

The available operating modes are Constant Current, Linear Constant Current and Constant Resistance. A graphical representation of these modes of operation is shown here.

LINEAR CONSTANT CURRENT MODE

The Linear Constant Current mode differs from conventional CC load mode in that it uses a high bandwidth automatic gain control circuit to track changes in peak input voltage and provides near instantaneous load response. This mode of operation is particularly useful when working with voltage square waves, step waveforms or pulse shaped DC waveforms or with distorted AC sine waves resulting from high current crest factor load settings. The Linear CC mode greatly improves AC load current control compared to typical AC loads that lack this capability.

WIDE OPERATING RANGE

3B Series loads are designed to accommodate a wide range of voltage and current input combinations within their maximum power capability. This allows the same load to be used for higher voltage and low current requirements as well as low voltage higher current applications. The V-I operating curve for the 3B Series models is shown on the right.

The AC load continuously tracks its input voltage current and power and safeguards against any operation outside of its operating limits. This flexible operating range allows the same load module to be used for a wide range of EUTs.

MULTI-PHASE APPLICATIONS

For multi-phase applications such as split-phase or three-phase AC power source testing, two or three 3B Series AC loads may be used to create a Split, Delta or Wye AC load. Each phase is individually programmable and synchronized to its respective input voltage and the load current will be zero phase referenced. Note that for Delta load applications, the load modules are sensing line-to-line voltage and maximum AC input voltage is 300Vrms.

3B SERIES VI-CURVES

NON LINEAR LOADS

Many real world AC loads draw non-sinusoidal load currents. Typical examples are bridge rectified input circuits that convert AC voltage into DC. These are called non-linear load and the AC current resulting from these circuits has a crest factor higher than that of a pure sinusoidal current. The 3B Series loads can simulate these load conditions using a non-sinusoidal current waveform in CC mode. The phase angle between voltage and current in this mode of operation can be shifted to simulate leading or lagging displacement power factor conditions. The higher the crest factor of the current waveform selected, the wider the power factor can be varied. The waveforms on the right illustrate these load conditions.

Linear and Non Linear Loads

STORED CF AND PF SETTINGS

Current crest factor (CF) and displacement power factor (PF) can be selected easily from the front panel or over bus by recalling preset combinations of CF and PF as function of waveform type. The table below shows these available settings. The relationship between available power factor and crest factor range is shown in the graph to the right for both leading and lagging power factor. If a sinusoidal load current is used (crest factor = $\sqrt{2}$), the power factor can only be +1.0 or =1.0. Displacement power factor less than one requires a load current with a higher crest than $\sqrt{2}$. Note that this requirement - which applies to all programmable AC Loads on the market - makes it not possible to simulate a pure inductive or capacitive AC load.

Waveform	Setting	A	B	C	D	E	Phase Shift
Sine wave	0	$\sqrt{2}$	2.0	2.5	3.0	3.5	
	1	1.5	1.6	1.7	1.8	1.9	
	2	3.0	3.1	3.2	3.3	3.4

3B SERIES AC & DC LOADS

FRONT PANEL OPERATION

3B Series AC & DC Loads are easily operated using the front panel keypad and bright red LED displays for easy of operation. Keys are clearly marked and setting are shown using LED indicators right next to their corresponding keys.

3B SERIES CABINETS

Model 3B126-126 AC Load Cabinet System

Model 3B126-126 Rear View

3B SERIES AC & DC LOADS

ORDERING INFORMATION:

Line 1: Specify DC Load Model:

3B0xx-xx Chassis or Cabinet System

Line 2: Specify Load Cable Option. (See Table)

Available Load Cable Options:

Option P/N	Description	MOQ
OPT-C1KA1	Load Cable, 1000A rated, 1 meter	2
OPT-C1KA2	Load Cable, 1000A rated, 2 meter	2
OPT-C1KA3	Load Cable, 1000A rated, 3 meter	2
OPT-C1KA4	Load Cable, 1000A rated, 4 meter	2
OPT-C1KA5	Load Cable, 1000A rated, 5 meter	2

AC Input Voltage

Please specify AC Line input voltage at the ship-to location on the order as either 120Vac or 230Vac.

Included in Mainframe Ship kit:

- User Manuals in PDF Format on CD ROM.
- AC Line Cord.
- Rack Handles (detached).
- Voltage Sense Input BNC Connector
- Banana Jack, Red
- Banana Jack, Black
- Spade Lugs (2)
- Certificate of Conformance.

Service and Support

Adaptive Power Systems' customer support is second to none. Our Customer Support Program provides the training, repair, calibration, and technical support services that our customers value. So, in addition to receiving the right test equipment, our customers can also count on excellent support before, during and after the sale. With company owned support and service centers around the world, support is never far away.

Complete calibration and repair services are offered at our US, European and Chinese manufacturing facilities (see contact info below). Calibrations are to original factory specifications and are traceable to NIST (National Institute of Standards and Technology).
