- Voltage up to 800 V
- Currents up to 2,250 A
- Power 500 W ... 28.8 kW
- Depending on model, temporary overload capacity
- Current, voltage, resistance, power mode
- Dynamic loads
- SCPI programming with measurement function

- Full electronic protection
- Analog measurement outputs for voltage and current
- Analog control input
- MPP tracking
- Dynamic function with synchronized data logging

Operating Modes

The electronic loads of the ZS have the four operating modes constant current, voltage, power and resistance. In addition, depending on the operating mode limit values can be set for the maximum permissible current and the minimum permissible voltage.

To increase the resolution for each device, along with the full setting range, a reduced setting of $\frac{1}{3}$ of the rated current is available. The load can be preset even without a connected test unit. The display then shows the values directly in amps, ohms, volts or watts.

Dynamic and Control Time

The inbuilt modular enables two independently-adjustable currents and times from 100 μ s ... 1 s. The control speed of the devices can be adjusted to the test unit in three stages (fast - medium - slow).

Protective Devices

The following protective devices are built in:

- Over-current protection
- Over-power protection
- Over-temperature protection
- Over-voltage protection
- Reverse polarity protection
- Protection of the GND lines on the Analog I/O interface

Voltage Switching

A trigger voltage can be set for peak-free voltage hook-up. The current is enabled when the input voltage exceeds the trigger voltage.

Overload Capacity

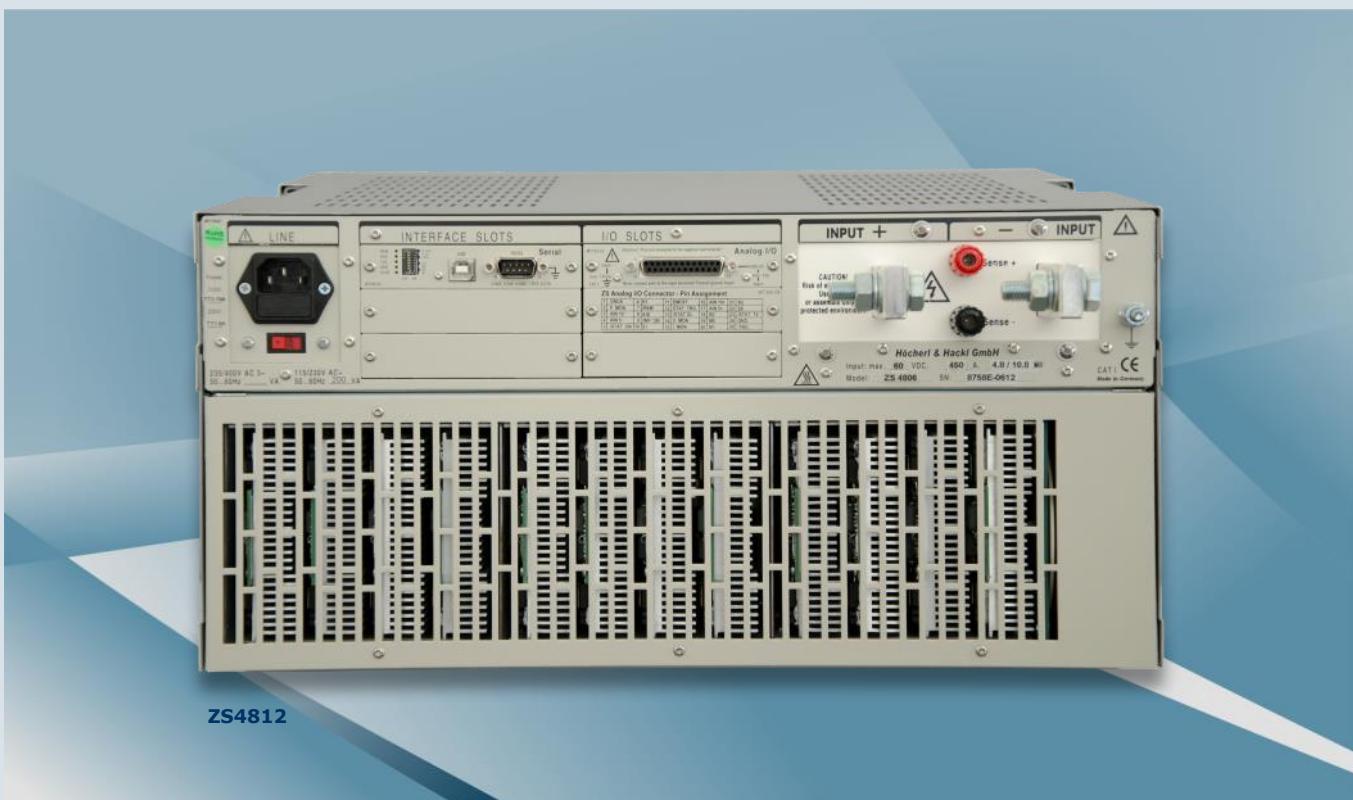

Depending on the model the devices have temporary overload capacity. The level and duration of the possible overload depends on the operating temperature of the output stage.

The device can also be used for significantly higher performance tasks.

Remote Control

All the load functions can be controlled remotely via Analog I/O Interface. The control inputs can be operated with TTL levels and 24 V from PLC controllers.

A version (ZS06) which is electrically isolated from the load input is optionally available .

Analog Control

In the operating modes CC, CV and CP the set value can be preset to 0...5 V or 0...10 V DC.

Analog Measurement Outputs

There are 0...10 V analog measurement signals available for voltage, current and power. The GND terminals can float ± 2 V with respect to the negative load input (also optionally isolated - Option ZS06).

Cooling

The units are air-cooled. To keep the operating noise low, the fans are temperature and current-dependently controlled. For better utilization of the maximum possible overload capacity the fans can be set to full power.

Mechanics

The ZS is a sturdy 19" rack design and can also be used as a table-top device.

From 5 height units there are retractable handles on the top of the device.

Optional castors can be mounted on heavy devices. Separate installation kits are not needed for 19" rack installation.

Connections

All connections are at the back. The current connections are solid copper rails with screw connectors.

Safety

Covers are available as contact protection for units for dangerous contact voltages.

Extended Function Range When Using an Optional Data Interface

- Programming in SCPI Syntax
- Settings with 16 Bit resolution
- Measurement function for voltage, current and power
- Programmable load profile
- Dynamic operation with variable current rise and fall speed
- Measurement data memory
- Trigger functions
- Use of supplied software tools and LabVIEW® driver

The interface cards are removable and can be exchanged or expanded as required.

The devices can be fitted with the following interfaces:

Data logging with constant scanning rate

| | | |
|---|--|--|
| Settings | Resolution Accuracy | 16 bits see Technical Data |
| Measure- ment func- tion | Resolution Sampling rate Accuracy | 18 bits approx. 300 ms for V+I, not synchronized Current: ±0.2 % of MV ±0.05 % of range Voltage: ±0.1 % of MV ±0.05 % of range Meas. data memory: max. 2000 V/I values + time |
| Loadprofile generator | Steps: Pulse duration: Ramp time: Repetition rate: | max. 50 200 µs ... 2000 s 0 ... 2000 s once, n times, continuous |

RS-232 + USB Interface (Option ZS01)²⁾

Option ZS01 adds an RS-232 and a USB interface (as virtual COM Port) to the device.

Programming is in SCPI.
(Including 2m RS-232 cable)

GPIB + RS-232 + USB Interface (Option ZS02)²⁾

The GPIB interface also includes the RS-232 + USB interface (Option ZS01).

(Including 2m RS-232 cable, no GPIB cable.)

GPIB Interface Expansion (Option ZS03)^{1) 3)}

If there is an existing RS-232 interface (Option ZS01), option ZS03 can be upgraded to the GPIB interface. Simply insert the card.

(Supplied without GPIB cable.)

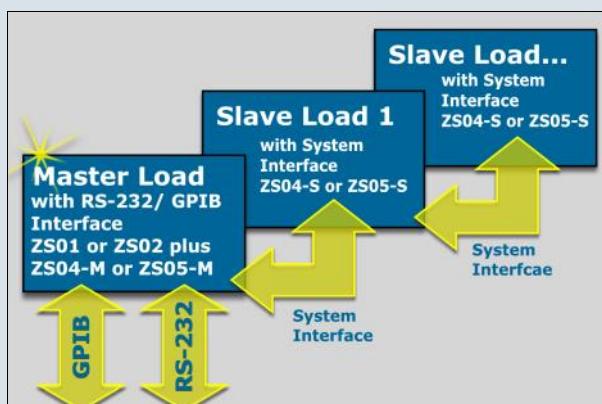

Ethernet-RS-232 Converter (Option ZS15)^{1) 3)}

Data is sent via the LAN card to the serial interface of the unit. Option ZS01 is needed for this. If option ZS01 is already available the device can be easily upgraded with the ZS15 option.

To Create Multi-Channel Systems

Order example for 3 loads:
Master with RS-232, connection via cable:
Load 1+ZS01+ZS04-M,
Load 2+ZS04-S,
Load 3+ZS04-S

- 1) Can be retrofitted at any time
- 2) Can only be retrofitted or produced by H&H.
- 3) Requires ZS01 or ZS02

System Interface Cable (Option ZS04-M, ZS04-S) (-M for master unit³⁾, -S for slave unit)

To build multi-channel systems, additional loads can be connected to the master device via the system interface. For this, the master unit is fitted with the system interface ZS04-M¹⁾ and the slave units with ZS04-S²⁾.

All units can then be programmed via the master interface. Connection is via the standard LAN cable. The load inputs remain electronically isolated. (Including 1 m cable.)

Fiber Optic System Interface (Option ZS05-M, ZS05-S) (-M for master unit³⁾, -S for slave unit)

For greater distances (> 3 m) and more than three connected devices a fiber optic system interface is recommended.

Simply replace the cable version option ZS04 with the fiber optic version ZS05.

The fiber optic connection is also recommended for higher EMC load.

(Including 5 m optical cable.)

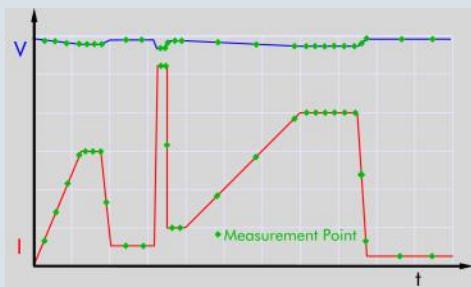

Data Acquisition Tool (Option)

Data Acquisition Tool

(Option ZS13-15) ¹⁾ ²⁾

The Data Acquisition Tool expands the range of the device by the following functions:

- Fast synchronized data logging for waveform generation with data memory
- Exponential inrush currents
- Battery capacity test
- MPP tracking for solar panel test

Synchronized data logging with variable scanning rate for waveform. Simultaneous measurement of voltage and current.

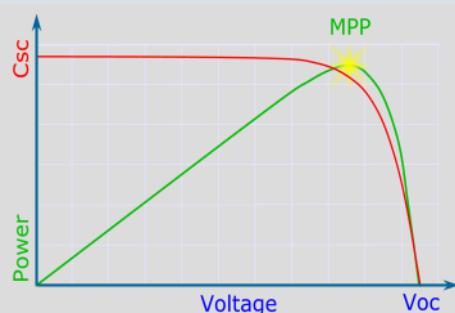

| | |
|---|--|
| Converter (in addition to 18 Bit standard A/D converter) | fast 15 Bit A/D converter Simultaneous measurement of voltage and current |
| Sampling rate Synchronization Measurement data memory | min 200 µs, can be programmed separately for each wave section and synchronized with waveform generator 2000 V/I value pairs with timestamp |

Solar Panel Test

The unit automatically searches for the Maximum Power Point in solar panels and self-adjusts as the sun's radiation changes.

Measures Ah and Wh.

Simultaneous recording of voltage and current is possible.

Battery Capacity Test

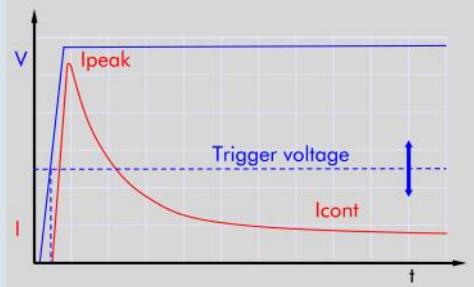

The device discharges a battery in any operating mode down to the preset cut-off voltage. When the cut-off voltage is reached the current is switched off. Measures Ah and Wh.

The measurement function can be started simultaneously in order to record the discharge curve.

Exponential Starting Processes

When the input voltage is switched on the unit generates an exponentially falling wave trajectory with adjustable time constant.

Peak current, time constant (min. 2 ms) and continuous current are programmable.

Supplied Drivers

You can find the latest LabVIEW® driver at:

www.hoecherl-hackl.com/

or

www.ni.com/downloads/instrument-drivers/d/

1) Can only be retrofitted or produced by H&H.

2) Requires ZS01 or ZS02

Electrically Isolated Analog I/O Interface ¹⁾ (Option ZS6)

In the case of potential differences between the negative load input and the signals on the Analog I/O Interface the standard Analog I/O card can be replaced with an isolated version. All measurement and control signals are transmitted via isolation amplifiers and opto-couplers. The card is pin-compatible with the standard Analog I/O card. The isolation voltage is 500 V DC with respect to the negative load input.

Power I/O Card ^{1) 3)} (Option ZS07)

The Power I/O card can be expanded to control external devices. 8 relay contacts (N/O 125 V/1 A) can be actuated via the data interface and 8 logical inputs (5V ... 24V, shared GND) can be queried. The inputs and outputs are isolated from the load input. The isolation voltage is 500 V DC with respect to the negative load input.

Analog I/O Extension Card ¹⁾ (Option ZS08)

The Analog I/O Extension card provides additional control inputs for analog presetting of trigger voltage and the current limiter. The card also has three relay outputs which are activated in the event of "Input on", reaching "Trigger voltage" or "Overload". The signals are electrically isolated from the load input via the isolation amplifier. The isolation voltage is 500 V DC with respect to the negative load input.

Temperature Interface ^{1) 3) 4)} (Option ZS16)

With the temperature interface temperatures from 0...100 °C are captured by a NiCr-Ni (Type K) sensor and transformed into a 0...10 VDC analog voltage.

This analog voltage can be fed to the analog control input of the Analog I/O Interface and read out via the data interface.

Castors ¹⁾ (Option ZS09)

Steerable castors can be screwed onto large devices for easier transport. A 19" rack can then often be dispensed with.

This option is available for devices from 5HU and is suitable only for hard floors.

Zero-Volt Option ²⁾ (Option ZS12)

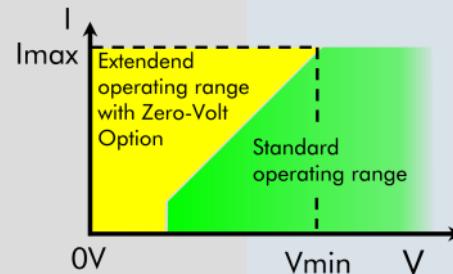

The zero-volt option expands the operating range of the electronic load up to the short circuit (approx. 10 mV). It can also compensate for voltage drops on power leads up to 0.5 V.

The zero-volt option is ideal for testing fuel cells in conjunction with adjusted measuring ranges. The available zero-volt options are listed in the technical overview.

The load capacity drops by approx. 3 V × the set current.

Reverse polarity protection and mains voltage switching is not available if you install a zero-volt option. The fans of the zero-volt option generate a continuous operating sound.

A zero-volt option is available up to 150 A.

Calibration

Factory Calibration Certificate (Option FCC-ZSxx) ⁵⁾

A Factory Calibration Certificate (FCC) can be supplied with the devices.

The FCC meets the requirements according to DIN EN ISO 9000ff.

This calibration certificate documents the traceability to nation-

al standards to illustrate the physical unit in accordance with the international device system (SI).

The recommended calibration interval is 1 year. We would be happy to calibrate your devices at regular intervals.

- 1) Can be retrofitted at any time.
- 2) Can only be retrofitted or produced by H+H.
- 3) Requires ZS01 or ZS02
- 4) Requires option ZS13

- 5) Can only be produced by H+H.

(The FCC is more economical if ordered together with a new device)

Software Tools

The following SW tools and drivers are delivered as standard with the interfaces:

Load Control

Individual devices and multi-channel systems can be controlled via the tool.

The range of functions includes PC device set-up with the option to save, data logging with graphical display and saving data for other programs.

Data Acquisition

As well as device control, measured data can be logged and saved.

The following measured values can be selected: Current - Voltage - Time.

Waveform Editor

The Waveform Editor permits the intelligent generation of load profiles in the form of straight sections. The load waveform is displayed on entry. The profiles can be saved.

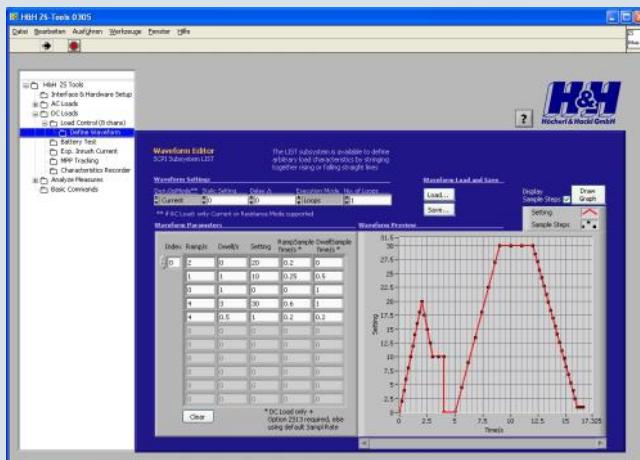

Basic Communication Tool

The Basic Communication Tool can be used to send any commands for test purposes and for commissioning of test systems.

MPP Tracking

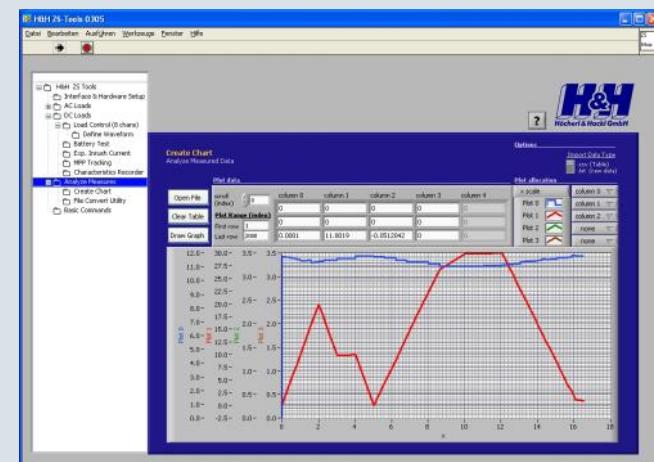

Solar panels can be tested in combination with Option ZS13. Voltage, current and power are displayed numerically.

All standard battery types can be discharged with the battery tool. The discharge curves are recorded and displayed. Ah and Wh are also logged.

1) Each range of the higher voltage classes of the same device power can also be selected as current range.

2) Level and duration of the peak power, see diagram on page 31

3) The setting range extends max. to the possible peak power.

4) Rise and fall times are defined of 10 % ... 90 % and 90 % ... 10 % of the maximum current. (current mode FAST, tolerance ±20 %)

5) SB4: 4 mm safety socket
BM8: M8 screw fitting
FK15: Flat copper rail 15x5 mm with 4 mm hole and M8 bolt
FK25: Flat copper rail 25x10 mm with 4 mm hole and M10 and M12 bolt

6) There is no reverse polarity protection with the zero-volt option.

7) Measured on the front from distance of 1 m

8) 1HU = 44.45mm

ZSLC16006

- High power density by water-cooling
- Power 8,000 W ... 40,000 W
- Minimal operating noise
- Temperature-controlled coolant circuit
- Condensation protection
- For coolant with up to 30 % glycol

- Current, voltage, resistance, power-mode
- Dynamic loads
- SCPI programming with measurement function
- Full electronic protection
- Analog measurement outputs for voltage and current
- Analog control input

Features

The liquid-cooled loads of the ZSLC series have all the features of the ZS series.

Water Cooling

Water cooling is a very efficient heat dispersion method which does not heat the environment. It is also very quiet. The use of water-cooled devices is therefore particularly suited for areas in which correspondingly high-performance air-cooled devices cannot be used because of their thermal load and noise. The devices are also considerably more compact.

Coolant

The coolant must have a pH-value of between 6 and 8. A glycol portion of 20% to 30% is permissible.

Coolant consumption is controlled according to power.

Coolant feed is switched off in standby mode.

The maximum coolant temperature for the rated power is 12 °C. Power derating should be considered at higher temperatures.

A correspondingly lower coolant quantity is needed at inlet temperatures of less than 12 °C.

To ensure that the device is

fed with sufficient coolant it requires an operating pressure of 3 bar at the inlet.

Drainage must be possible without creating back pressure.

The required flow rate can be found in the type overview.

Condensation Protection

The ZSLC devices are protected against condensation of liquid by cold coolant.

Coolant distributor

8,000 W ... 24,000 W DC Water-cooled

ZSLV1502

- Specially designed for testing fuel cells
- Currents up to 2,250 A
- Power 1,000 W ... 6,000 W
- Full current at 150 mV input voltage
- Current, voltage, resistance, power mode
- Dynamic loads
- SCPI programming with measurement function

- Full electronic protection
- Analog measurement outputs for voltage and current
- Analog control input

|---|---------------------------|
| Coolant | Water or water-glycol mix |
| Materials in the cooling circuit | Copper, Brass, plastic |
| Max. coolant temperature | 12 °C for rated power |
| Min. coolant temperature | 5 °C |
| Derating at higher coolant temperature | -5 %/°C |
| Coolant pressure for rated power | min. 3 bar |
| Permissible operating pressure | max. 5 bar |
| Coolant connection | ½ inch per 8,000 W |

ZS512-4

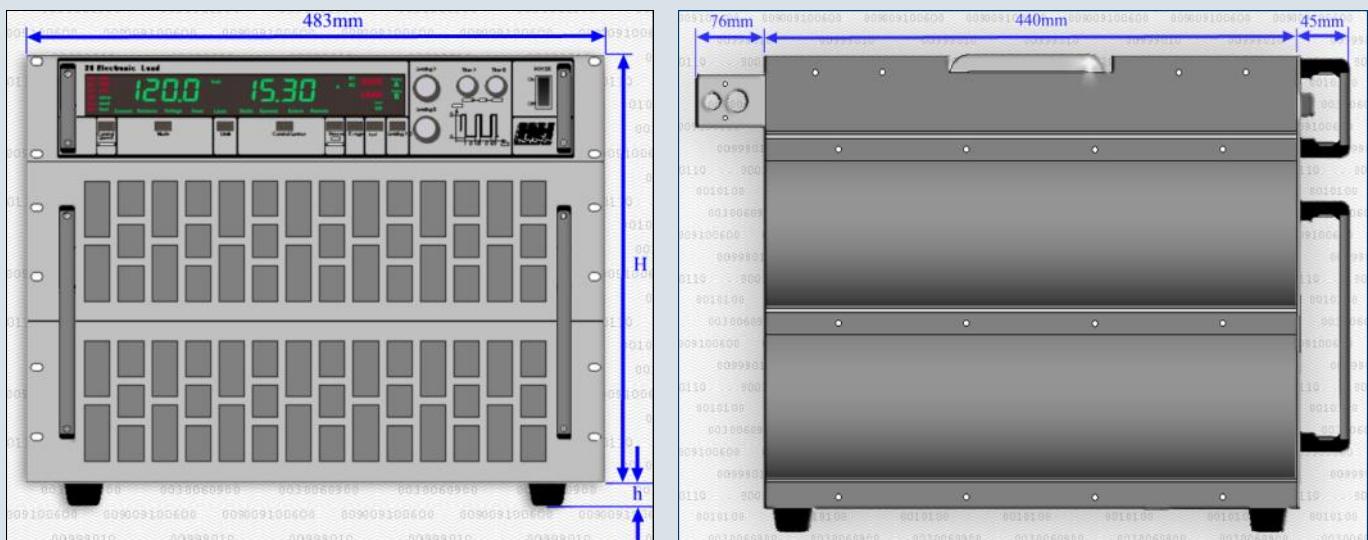

- 1) 101 % with 800 V devices
- 2) No reverse polarity protection with Zero-Volt option
- 3) Apart from Zero-Volt option

**CALTEST
Instruments Ltd**
Specialists in power
and instrumentation

Power sources and test instrumentation solutions

Caltest have been providing power sources and test instrumentation solutions for over 20 years and are proud to represent a number of industry leading manufacturers.

As well as supplying world class power sources and test instrumentation Caltest also has a service centre and UKAS calibration laboratory.
