

6,000VA  
20-5,000 Hz

1Ø → 0-338V<sub>L-N</sub>  
2Ø → 0-600V<sub>L-L</sub>

Standard Features:

- Advanced Linear Amplifiers Provide Very Low Voltage Distortion, no Switching Noise, Fast Voltage and Current Slew Rates, Exceptionally Low Output Impedance and High Peak Current Capability
- Single or Split phase selectable output from front panel or bus command
- 20 to 5,000 Hz, Full Power Bandwidth Operation – 5Hz to 50KHz small signal bandwidth, 3dB at 10% of full voltage
- Precision Voltage Programming – 0.05% with Continuous Self-Calibration (CSC) engaged
- True-RMS Metering of Volts, Amps, and Power
- GPIB (IEEE-488.2) or RS-232 Interface
- Waveform Library – Arbitrary Waveform Generator
- Up to 99 Programs with Associated Transients for Static and Dynamic Test Applications
- UPC Studio Software Suite

Available Options:

- T-versions include external transformer assembly for higher voltage ranges
- Programmable Output Impedance
- Harmonic Analysis and Waveform Synthesis
- Peak Inrush Capture and Waveform Analysis (Available on models with UPC1 controller)
- UPC Test Manager Software

Multi Chassis Systems

Higher power systems available by paralleling 2 or more AMX chassis in Master/Slave configuration. See AMX Parallelable Models data sheet.

UPC Manager Software Suite  
*Master the Power of the Wave!*

UPC Manager Software gives you the tools necessary to quickly and easily operate your AC Power Source. With our graphical interface control all areas of your AC Power Source testing with simple presets, user prompts, test sequences, test plans and custom reports.

Model 160AMX

As a member of Pacific Power’s AMX-Series popular family of high performance Linear AC Power Sources, the 160AMX offers the same low output voltage noise and distortion, ease of installation, and high AC waveform fidelity as found in all of Pacific Power’s Linear AC Power Sources. Control and operational features provide a high degree of versatility and ease of use for applications ranging from simple, manually controlled frequency conversion to harmonic testing and sophisticated programmable transient simulation.

AC TEST POWER

All 160AMX and 160AMXT models are equipped with a powerful micro-controller with the ability to operate as a fully integrated test system. This enables a variety of power conditions and transients to be applied to the device under test while metering and analyzing all output performance parameters. For higher power requirements, refer to the AMX Parallelable data sheet for multi-chassis system configuration info.

FREQUENCY/ VOLTAGE CONVERSION

The 160AMX is an excellent source of stable AC Voltage over the frequency range of 20 to 5,000 Hz (Direct Coupled Range) or 45 to 5,000 Hz (Transformer Coupled AMXT models) when using the high-end UPC-12 controller. Also available in 1,200 Hz maximum output frequency when using UPC1 or Manual controller. The output frequency is quartz-crystal stabilized. Output voltages up to 135V<sub>L-N</sub> in single phase mode and up to 270V<sub>L-L</sub> in split phase mode are available on the 160AMX model and up to 600V<sub>L-L</sub> in split phase mode on the 160AMXT model.

PHASE CONVERSION

With the ability to provide either single or two phase output, the 160AMX is a good choice to convert three-phase line voltage into precisely controlled split (two-phase) or single-phase output power.

UPC SERIES CONTROLLER

Three controller models are available in both manual and programmable control version. All controllers provide manual operation from the front panel. Programmable Controllers may be operated from the front panel or from a remote interface via RS 232 or GPIB.

The Leader in AC Power Technology

An early pioneer in the development solid-state power conversion equipment, Pacific Power Source continues to develop, manufacture, and market both linear and high-performance PWM AC Power Sources. Pacific Power Source’s reputation as a market and technology leader is best demonstrated by its continuing investments in both research and development and world-wide customer support. With corporate owned offices in the United States, Germany, the United Kingdom, and China, local personalized support is always available.

#### NOTES:

1. Rated output power is based on a combination of nominal output voltage, rated current and load power factor. Values stated represent the maximum capabilities of a given model (maximum power in split phase (Form2) direct coupled mode is 4 kVA). Consult factory for assistance in determining specific unit capabilities as they might apply to your application.
2. Unit is operable as single phase with dual range capability. Output voltage range and 1/2 conversions are selected by front panel or bus commands.
3. Vmax is output voltage with nominal input and full rated load applied.
4. Available current will vary with output voltage and power factor. Current shown is per phase.

### Thermal and Power Factor Rating Curves

Rated Continuous Load Current as a Function of Ambient Temperature and Power Factor and Output Voltage at Nominal Input Line.

#### THERMAL RATING -AC CURRENT RMS

Short term overloads to 150% of rated current are permitted. Operating time before thermal shutdown or circuit breaker trip varies from seconds to several minutes depending upon line and temperature conditions.

#### OUTPUT VOLTAGE-AC VOLTS RMS

Short term overloads to 150% are permitted. Operating time before thermal shutdown or circuit breaker trip varies from seconds to several minutes depending upon line and temperature conditions.

## Total Control, Metering, and Analysis of AC Power- Simple, Intuitive Operation

The **UPC Controller** is a highly versatile one, two, or three phase oscillator/signal generator designed to control any of Pacific Power's AC Power Sources. Three controller models, UPC-1M, UPC-1, or UPC-12 are offered. To use the full 5KHz power bandwidth of the 160AMX or 160AMXT, the UPC-12 controller is required.

Using the front panel keyboard and display, all controller models provide for selection of power source output mode, coupling, voltage, and frequency. Selecting the correct UPC controller for a given application varies with your test requirement, desired features, and price.

Both the **UPC-1** and **UPC-12 Controllers** are available with either RS-232 or GPIB remote interface. Commands are structured in accordance with SCPI (Standard Commands for Programmable Instruments).

### External Inputs/Outputs

Analog Auxiliary Input	Each phase is algebraically summed with UPC waveform and amplified 25X to the direct coupled output. $\pm 10\text{Vpk}$ (20Vpk-pk). One input per phase. $Z_{in} = 600\ \Omega$
AM-Amplitude Modulation	$\pm 10\text{ Vdc}$ (20Vpk-pk) modulates the output voltage $\pm 100\%$ . One input per phase. $Z_{in} = 600\ \Omega$
Sync Outputs Zero Crossing	Positive Zero Crossing (0°) of Phase A analog output
Transient Trigger	Pulse at the start of a transient event. (UPC-32 only)
Transient Pedestal	TTL True when a transient is in progress
Output Clock	UPC-1, TTL level pulse rate varies with output frequency UPC-12, TTL level 1024 x output frequency

### Waveform Control

Waveform Synthesis (/HAS Option)	Creates waveform by entering magnitude as % of fundamental and specified phase angle for 2nd through the 51st harmonic
Waveform Analysis (/HAS Option)	Reports waveform harmonic content and phase angle relative to the fundamental for the 2nd through the 51st harmonic as Total, Odd, and Even harmonic distortion

## Protection and Safety

Hardware	Over-current, short circuit, over- temperature
Programmable Current Limit	A single RMS programmed, average responding, value is provided for all phases. Limits current by reducing output voltage.
Programmable Current Protect	Allows the power source to operate in "constant voltage" mode, interrupting output when specified current protect limit is exceeded.
