

2,000VA
15-1,200 Hz

1Ø → 0-150V_{L-N}
2Ø → 0-300V_{L₁-L₂}
3Ø → 0-150/260V_{L-L}

Standard Features:

- 1 phase / 3 phase Selectable Output from front panel or bus command
- 15 to 1,200 Hz. Operation – 5,000 Hz small signal bandwidth
- Precision Voltage Programming – 0.05% with Continuous Self-Calibration (CSC) engaged
- True-RMS metering of volts, amps, and power
- GPIB (IEEE-488.2) or RS-232 Interface
- Waveform Library – Arbitrary Waveform Generator
- 99 stored programs with associated transients for static and dynamic test applications
- UPC Studio Software Suite
- UPC Interactive LabVIEW™ Libraries

Available options:

- M99211- 3Ø, 0-312/540V_{L-L} external transformer assembly
- Rack enclosures with caster base
- Programmable Output Impedance
- Harmonic Analysis and Waveform Synthesis
- Peak Inrush Capture and Waveform Analysis
- UPC Test Manager Software Application

UPC Manager Software Suite *Master the Power of the Wave!*

UPC Manager Software gives you the tools necessary to quickly and easily operate your AC Power Source. With our graphical interface control all areas of your AC Power Source testing with simple presets, user prompts, test sequences, test plans and custom reports.

Model 320-ASX

As a member of Pacific's ASX-Series family of high performance AC Power Sources, the 320ASX offers the low acoustic noise, ease of installation, and maximum power density found in all of Pacific's high frequency, pulse width modulated AC Power Sources. Control and operational features provide a high degree of versatility and ease for applications ranging from simple, manually controlled frequency conversion to harmonic testing and sophisticated bus programmable transient simulation.

AC TEST POWER

The 320-ASX is equipped with a powerful micro-controller with the ability to operate as a fully integrated test system. It supplies a variety of power conditions and transients to the device under test while metering and analyzing all output performance parameters.

FREQUENCY/ VOLTAGE CONVERSION

The 320-ASX is an excellent source of stable AC Voltage over the frequency range of 15 to 1,200 Hz. The output frequency is quartz-crystal stabilized. Output voltages up to 300V are available.

PHASE CONVERSION

With the ability to provide single, two, and three-phase outputs, the 320ASX is an ideal choice to convert three-phase line voltage into precisely controlled split (two-phase) or single-phase output power.

UPC SERIES CONTROLLER

Three controller models are available offering both manual and programmable control. All controllers provide manual operation from the front panel. Programmable Controllers may be operated from the front panel or from a remote interface via RS 232 or GPIB.

The Leader in AC Power Technology

An early pioneer in the development solid-state power conversion equipment, Pacific Power Source continues to develop, manufacture, and market both linear and high-performance PWM AC Power Sources. Pacific's reputation as a market and technology leader is best demonstrated by its continuing investments in both research and development and world-wide customer support. With corporate owned offices in the United States, France, the United Kingdom, and China, local personalized support is always available.

NOTES:

1. Rated output power is based on a combination of nominal output voltage, rated current and load power factor. Values stated represent the maximum capabilities of a given model. Consult factory for assistance in determining specific unit capabilities as they might apply to your application.
2. Unit is operable as single phase with dual range capability or as a three phase. Output voltage range and 1/3 conversions are selected by front panel or bus commands.
3. Vmax is output voltage with nominal input and full rated load applied.
4. Available current will vary with output voltage and power factor.

When combined with the 320ASX, the M99211 external Transformer assembly provides an additional 3Ø, high voltage, output range. Three high performance, multi-tapped, autotransformers are assembled in a 19" rack-mount chassis and are configured with either a 1.5, 2.0, 2.5:1 step-up ratio (specified at time of order).

Refer to the adjacent table for rated output voltages and currents when supplied with a nominal, 125 V/Ø input signal. Complete M99211 modification description available on request. Additional current/voltage ranges available, consult factory.

Total Control, Metering, and Analysis of AC Power - Simple, Intuitive Operation

The **UPC Controller** is a highly versatile one, two, or three phase oscillator/signal generator designed to control any of Pacific's AC Power Sources. Three controller models, UPC-3M, UPC-3, or UPC-32 are offered for use with the 320ASX.

Using the front panel keyboard and display, all controller models provide for selection of power source output mode, coupling, voltage, and frequency. Selecting the correct UPC controller for a given application varies with your test requirement, desired features, and price.

Both the **UPC-3 and UPC-32 Controllers** are available with either RS-232 or GPIB remote interface. Commands are structured in accordance with SCPI (Standard Commands for Programmable Instruments).

Protection and Safety

Hardware	Over-current, short circuit, over- temperature
Programmable Current Limit	A single RMS programmed, average responding, value provided for all phases. Limits current by reducing output voltage.
Programmable Current Protect	Allows the power source to operate in "constant voltage" mode, interrupting output when specified current protect limit is exceeded.
